| 1. Getting around the city | 5. The city of skyscrapers |
| 2. Always in a hurry | 6. For the holiday and more |

3. Unknown side of the city

7. Saving the variety

4. Winning and losing

8. Nickname for a building

A. New York is really the melting pot of the world. Over 30 percent of its residents have come from abroad. It is believed that the city has the greatest linguistic diversity on the planet. There are over 800 different languages spoken by its people. As some of these languages are nearly extinct, the City University of New York has begun a project called the Endangered Language Alliance. Its aim is to preserve rare languages like Bukhari, Vhlaski, and Ormuri.

B. New Yorkers love to think they know everything about their city: where to find the best fruit, how to avoid paying full price at museums, what route to take to avoid traffic. But New York City can reveal new treasures even to its veterans. Beyond the city where New-Yorkers work, eat, play and commute every day lies a hidden New York: mysterious, forgotten, abandoned or just overlooked. There are places about which you're not likely to read in any guidebook.

C. The Chrysler Building was in a race with the Bank of Manhattan for getting the title of the tallest skyscraper in the world. The Bank was likely to triumph, with its height of 282 meters. But the spire of the Chrysler Building was constructed in secret inside the tower. Just one week after the Bank of Manhattan was finished, it was put in place, making it 318 meters tall and beating the Bank. It wouldn't keep this title for long: one year later the Empire State Building was erected.

D. The Flatiron Building was constructed between 1901 and 1903 at the intersection of Broadway and Fifth Avenue. It was designed by Chicago's Daniel Burnham as a steel-frame skyscraper covered with white terra-cotta. Built as the headquarters of the Fuller Construction company, the skyscraper was meant to be named Fuller Building. But locals soon started calling it "Flatiron" because of its unusual shape. The name stuck and soon became official.

E. How does Rockefeller Center manage to find the perfect fur-tree each

Christmas season? They do aerial searches by helicopter, of course, and bring it to the city during the night when there isn't much traffic on the streets. After the tree is taken down for the year, it continues to be useful. For example, in 2005 Habitat for Humanity used the wood to make doorframes for houses for the poor and in 2012 the paper was used to publish a book.

F. In New York life never stands still. People have to call cabs, ride subway cars, do business of all kinds, eat pizzas and sandwiches for lunch. When you multiply that by more than eight million people in less than 500 square miles, you get the idea: everyone goes everywhere as fast as it is humanly possible. Whatever you do, don't stop in the middle of the sidewalk or you'll make everyone around you incredibly angry.

G. New York is extremely easy to navigate. Manhattan is divided into numbered streets from north to south and avenues from east to west. It's almost impossible to get lost there. Buses are useful to travel around Manhattan, and the subway is the best means of transport to the other parts of the city. At some stage you'll definitely use a yellow taxi. Try to get one on an avenue that's going in the same direction you are – you'll save time and money. And don't forget to leave a tip for the driver.

Driverless cars

Driverless cars are expected to be rolling into the streets within the next 20 years. In fact, they've legally been on the roads for the past years, approved for testing purposes. It is predicted that driverless vehicles will be commercially available at a high cost within 7 years, but it may take another 8 years for prices to drop enough to spur mass consumption. Today, the discussions focus primarily on the shifting of accident liability to manufacturers and all the goodness that comes along with reducing accidents. A truly driverless road would not be accident-free as there would still be a number of accidents caused by mechanical or computer errors, weather conditions, pedestrians and sheer random chance. But it would make the now-routine loss of life on the roads far rarer. The concept of a "driver" will be replaced with that of an "operator", who simply programs the vehicle's GPS to arrive at the desired destination and pushes the "Start" button to begin the trip. Since judgment will no longer be required of the operator, they won't need a driver's license. Theoretically, a 10-year-old child could independently take the car to school in the morning.

Computer-operated cars will eventually reshape the car design as things like windshields will become less necessary. Drivers will be able to sit wherever they'd like in their cars. There will be no need for gas

and brake pedals as speed will be automatically controlled by the computer. The steering wheel and the turn signal arm can also be eliminated once the public gets used to reliability of these vehicles. Each passenger will have a personal video display informing about a current location, the distance to your destination, speed and personal entertainment selections. The concept of 'distracted driving' will disappear as there will be no reason to pay attention to where you are going. Vehicle owners will no longer buy collision insurance since manufacturers will be solely responsible for damage. Owners will only need theft insurance and coverage for hail, falling objects or floods. To take this one step further, personal vehicle ownership may dramatically diminish. Car dealers will have lots full of vehicles for hire on a daily or hourly basis instead of vehicles for sale. When you need a car, you'll summon one using your mobile phone. The closest unmanned vehicle will be dispatched to your home to take you where you need to go. When done, you'll simply push the button for the unmanned vehicle to drive itself back to the rental lot. The social and cultural impact of driverless cars could cause far more upheaval than any of us could imagine. Perhaps, it would be even greater than the impact the Internet had on commerce and communication. Obviously, the picture being painted is the one that assumes total adoption, which is far from realistic. You will always have transitional delays caused by the lack of free cars, the longevity of today's vehicles and cultural resistance. This resembles the historical factors that affected the transition from horse to the automobile. At the moment, the driverless car seems like a novelty. However, it will open up new prospects. The prospect of flying cars may soon become a reality. With computer-controlled vehicles that strictly follow traffic rules, three dimensional roads become far less scary and more a matter of simply solving the technological challenge. Where we're going, we may not need roads at all.

According to the author driverless cars will become cheap enough for most people to buy within the following ...

- 1) 8 years.
- 2) 15 years.
- 3) 7 years.
